WHAT IS METHYLENE BLUE?

- Known as “Magic Bullet” MB
- METHYLTHIONINIUM CHLORIDE
- Cure all...from autism to cancer and everything in between including mental illnesses like bipolar, depression, anxiety, Schizophrenia, cognitive impairment, Alzheimer's, Parkinson's, neurodegeneration disorders, PTSD, and other labels that SSRI drugs are used to treat/mask. It is a known nootropic to increase memory, mood and longevity.

METHYLENE BLUE (MB) IMPROVES MITOCHONDRIAL ACTIVITY

- Brain has the most mitochondria
- Crosses the blood brain barrier
- Improves mitochondrial efficiency and respiration
- Acts as an antioxidant and increases the brain cell life span
- Neuroprotectant
- Boosts serotonin
- Boost norepinephrine effecting anxiety, depression and memory
- Boost brain cell respiration increasing oxygen to brain

METHYLENE BLUE

- Increases cellular energy which positively effects
- 1st free radical that is found in the cell is a superoxide. The MB binds to the superoxide and reduces it to water. Thus stopping the oxidative cascade at the beginning before it can do any damage in the body.
- Used to treat dementia, cancer, chemo, malaria, UTIs, cyanide, poisoning, methemoglobinemia, antidepressant.
- Increases blood flow.

METHYLENE BLUE DOES

- Boosts mitochondrial energy
- Anti aging
- Increased memory
- Increased mood
- Longevity
- Crosses the blood brain barrier
- Increases cerebral blood flow
- Improves mitochondrial efficiency and respiration
- Neurotransmitters inhibits MOA

METHYLENE BLUE

- Elevates oxygen consumption with helps glucose and increases ATP production
- Rescued brain cell mitochondria from the damaging effects of the toxin by donating electrons in the electron transport chain broken by ROS. Thus bypassing broken transport chain with donated electrons as an alternative electron carrier.

BEST PLACE TO GET SAFE, INGESTABLE METHYLENE BLUE IS AT...
